

Final Project

LIS470 – Team/Individual Components

Assignment Description

For your final project, you will create an interactive mockup of your design. You will then create a final presentation and project brief to communicate your design process this semester.

Part I. Create Interactive Mockups (Team)

Take your wireframes and turn them into a **working interactive mockup** in Figma. Your mockup should have **at least five screens** that are connected so a user can click through them when previewing your mockup. You do not have to make every part of your design interactive (e.g., all the buttons and links don't need to take you somewhere when clicked), but you should have all the elements needed to do a simple task (e.g., place an order in a food app). Your mockup should be high-fidelity. That is, it should look like a final design with all the elements you would expect on your site and with final images and text rather than placeholders.

Part II. Final Presentation (Team)

Look back over the semester and **create a 7-minute presentation** summarizing your design process. This presentation should tell the story of your design, focusing on how your understanding of the design problem and how your solution changed over time. A good rule of thumb is to plan 1 minute per slide, so plan to have about 7 slides. You will record your presentation and share it on our course Canvas page (see the assignment description for where you will share the presentation). **Everyone on your team needs to speak** during your presentation. In your presentation, discuss:

1. The **activity** your team observed
2. The **problem** you distilled from your observations
3. The **design idea** you decided to pursue (after brainstorming and sketching your ideas)
4. The evolution of your design **prototypes** (e.g., storyboard, paper prototype, wireframes)
5. Your **final design** (i.e., your mockups)
6. **Next steps** (if given more time, what would you do next)

Make sure you **emphasize what you learned from each step of the process** and how this informed the decisions you made about your design. For example, *“from our observations we learned that navigation is one of the key challenges of grocery shopping”* or *“from our brainstorming we learned that one strategy to ease onboarding is to link new club members with existing members”*. When you come to discussing your design (e.g., storyboard, wireframe, mockups) **emphasize why you designed things the way you did based on course concepts**.

You should include photos of your design artifacts (e.g., affinity diagram, brainstormed ideas, storyboard, paper prototype, and so on) in your presentation, but **do not simply click through slides of your artifacts** and say, “This was our affinity diagram... and this was our paper prototype”. Any images of your artifacts should be there to help you tell the story of your design process. Focus less on the image of each artifact and more on what you learned about your design problem or solution by making it.

Part III. UX Case Study (Individual)

A major component of any design project is the final report (also called UX Case Study). This document serves as a comprehensive summary of the project, detailing the process, findings, design solutions, and outcomes. It acts as both a record of the work completed and a communication tool for stakeholders, demonstrating the value of the design effort and its alignment with user needs and project goals.

Each team member is responsible for creating their own case study. The case study should mirror the structure of your final presentation, telling the story of your design process this semester. However, you will **tell the story from your perspective**. The introductory part of the brief should include:

Background to describe the context (why your team chose this project and the objectives), a **Disclaimer** that this was a group project, **Names** of group members names, **Your Role** in the project, and an **Overview of the Design Process** you used.

The remainder of the case study should cover the phases of the design thinking process we used this semester and the activities your team undertook:

Empathize: Describe how you gathered insights and understanding about the needs of the people or stakeholders you are designing for. Highlight key findings that influenced your design.

Define: Explain how you synthesized your research to define a clear problem statement or design challenge. Discuss how you framed the problem in a way that guided your work throughout the semester.

Ideate: Document your brainstorming process and the generation of ideas. Include sketches, notes, or other evidence of divergent thinking. Highlight how you narrowed down your options to select a concept to develop further.

Prototype: Share details about the prototyping phase. Describe what you created to test your ideas—whether low-fidelity or high-fidelity prototypes—and how these evolved. This is where you should share your team’s interactive mockup. This section should include a short description of the task you want users to do with the mockup and a description of at least five pages of the mockup to achieve that task.

When writing each section you should reflect on...

What you learned about the users - What surprised you about their needs, behaviors, or perspectives? How did your understanding of the users evolve over time? Were there moments when their feedback shifted your approach or revealed something you hadn't considered?

What you learned about the design process - How did each stage—empathizing, defining, ideating, and prototyping—challenge or inspire you? Did any part of the process feel particularly rewarding or difficult? Were there tools or methods that you found especially effective or frustrating?

What you learned about yourself as a designer - How did your skills, mindset, or confidence change over the course of the project? Did you discover strengths or areas for improvement? Were there moments where you stepped out of your comfort zone or embraced creative risks?

You do not need to respond to all these questions, but they should make their way into your narrative.

Your case study should be a visually engaging document that clearly communicates your journey and the decisions you made at each stage. Include diagrams, photos, and any other media that enhance the storytelling. These case studies are what would comprise a design portfolio. Here are a few examples of a case studies:

- [WhatsApp Re-Design — UI/UX Case Study](#)
- [UI/UX Case Study: Designing Cash Flow Feature with Design Thinking Approach for Krealogi](#)

To craft the case study, you can use your Medium page (from the journal entries). If you have a portfolio on another platform, you can add this project as an entry and share the URL.

Grading Rubric

Final Presentation and Interactive Mockup (Team)

Your final presentation will be worth **15 points**, with 10 points for the presentation itself and 5 points for the interactive mockup. The points will be earned as follows:

1. Presentation is less than 7 minutes
2. Every team-member spoke during the presentation
3. Describes insights gained from observations
4. Describes the problem distilled from the observations
5. Describes different themes of brainstormed design ideas
6. Shows how the design idea evolved through sketching and prototyping
7. Shows final mockups of the app/website
8. Provides justifications for key aspects of the design based on course concepts
9. Describes how the final design solves the problem distilled from observations
10. Slides are easy to understand, have minimal text, and make effective use of visuals
11. Mockup: Report includes a link to a working interactive mockup and a description of the task users should be able to do with the mockup
12. Mockup: Interactive mockup connects at least 5 distinct screens
13. Mockup: Screens make effective use of visual design principles (e.g., focus, contrast)
14. Mockup: Screens make effective use of information architecture principles (e.g., labels, hierarchy, navigation, grids)
15. Mockup: Mockup includes connections between screens that enable navigation between them

Design Brief (Individual)

Your final report will be worth 10 points. The points will be earned as follows:

1. Brief: Includes team name, team member names, and the date
2. Brief: Writing is clear and grammatically correct
3. Brief: Writing includes reflections about users, design process, and designer self
4. Brief: Describes insights gained from observation
5. Brief: Describes the problem distilled from the observations
6. Brief: Describes the themes of brainstormed design ideas
7. Brief: Describes how design idea evolved through sketching and prototyping
8. Brief: Describes how the final design solves the problem
9. Brief: Makes effective use of images and annotation to highlight aspects of the design artifacts (e.g., sketches, storyboards) and final design
10. Brief: Provides justifications for key aspects of the design based on course concepts
