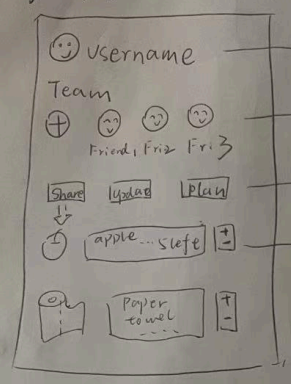
Design 1:



→ user's info

→ social team

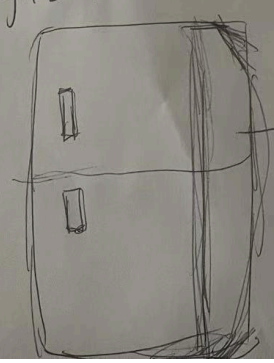
→ different tab navigate to differe page

→ share food page for example

① showing number of food left

② user can add or remove items

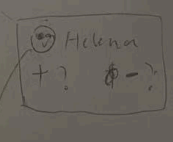
Design 2:



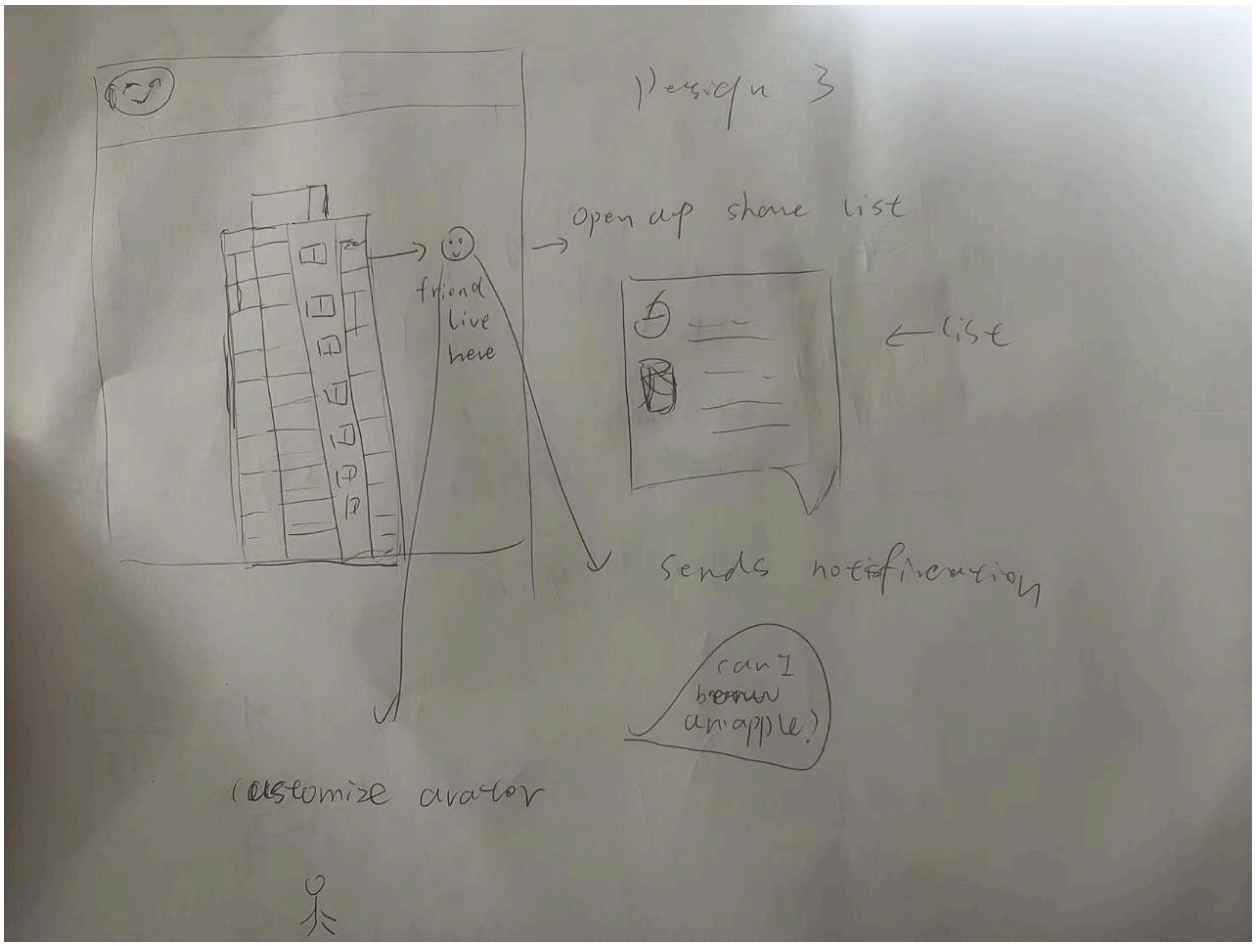
→ opens inside the refrigerator

shows history

opens another panel



→ add or remove items



Feedbacks: Hi Helena, I love your sketch, especially the fridge visualization and the idea of showing who lives together—it makes the shared living experience feel very intuitive. The shared list and notification features are also really useful for coordination, but the interface feels a bit busy with multiple elements like tabs and customization. It might help to simplify the layout and make the main flow, like accessing and updating the shared list, more clear.
