

Final Project

Start Assignment

- Due May 4 by 11:59pm
- Points 20
- Submitting a website url, a media recording, or a file upload

The team component of your final project ([Final Project](#)

(https://canvas.wisc.edu/courses/500561/files/50693518/download?download_frd=1)).

Part I - Interactive Mockup

Take your wireframes and turn them into a **working interactive mockup** in Figma. Your mockup should have **at least 8 connected screens** so a user can click through them when previewing it. You do not have to make every part of your design interactive (e.g., all the buttons and links don't need to take you somewhere when clicked), but you should have all the elements needed to do a simple task (e.g., place an order in a food app). Your mockup should be high-fidelity. That is, it should look like a final design, with all the elements you would expect on your site, and include final images and text rather than placeholders. You should link to your Interactive Mockup in the presentation.

Part II - Presentation

Look back over the semester and **create a 7-minute presentation** summarizing your design process. This presentation should tell the story of your design, focusing on how your understanding of the design problem and how your solution changed over time. A good rule of thumb is to plan 1 minute per slide, so plan to have about 7 slides. You will record your presentation and share it on our course Canvas page (see the assignment description for the location). **Everyone on your team needs to speak** during your presentation. In your presentation, discuss:

1. The **activity** your team observed
2. The **problem** you distilled from your observations

3. The **design idea** you decided to pursue (after brainstorming and sketching your ideas)
4. The evolution of your design **prototypes** (e.g., storyboard, paper prototype, wireframes)
5. Your **final design** (i.e., your mockups)
6. **Next steps** (if given more time, what would you do next)

Make sure you **emphasize what you learned from each step of the process** and how this informed the decisions you made about your design. For example, *“from our observations we learned that navigation is one of the key challenges of grocery shopping”* or *“from our brainstorming we learned that one strategy to ease onboarding is to link new club members with existing members”*. When you come to discussing your design (e.g., storyboard, wireframe, mockups), **emphasize why you designed things the way you did based on course concepts**.

You should include photos of your design artifacts (e.g., affinity diagram, brainstormed ideas, storyboard, paper prototype, and so on) in your presentation, but **do not simply click through slides of your artifacts** and say, “This was our affinity diagram... and this was our paper prototype”. Any images of your artifacts should help you tell the story of your design process. Focus less on the image of each artifact and more on what you learned about your design problem or solution by making it.

The presentation can be recorded via Zoom and uploaded to this page.

What to upload:

1. A video recording of your presentation
2. A PDF of your final presentation
