Smart Grocery Price Comparison Tool

3/22/2026

This design is a smart grocery price comparison tool that helps students compare prices across different stores. Users can input a grocery list, and the system highlights the cheapest options, suggests cost-saving alternatives, and tracks the total cost in real time. The goal is to help students make informed and budget-friendly decisions while planning their grocery trips.

Design 1

Grocery List	
Milk	
\$3.50 (Target)	★
\$2.90 (Walmart)	★
Total:	
Target: \$42	
Walmart: \$36	★

Shows cheapest store per item

Highlights cheapest option

Design2

Budget: \$40 Current: \$38 ☒		Suggest cheaper substitutes
Chicken		
→ Suggest: store brand (-\$2)		
Milk		
→ On sale at Walmart		Real-time budget tracking

Feedback:

Helena: Hi Peixin, I love your design 2! It's both minimalistic & fun, and I think maybe you could try to combine Design 1 and Design 2 together, like clicking on the person on design 2 will lead you to a list like design 1. I think in that way you could keep all the important information and stay minimalistic with the UI design.

Final Sketch:

The final sketch builds on the three initial designs by combining price comparison, budget tracking, and smart suggestions into a single interface. Based on my teammate's feedback, I integrated the overview screen with a more detailed grocery list, allowing users to access more information through simple interactions. This helps maintain a clean and minimalistic layout while still providing essential details. The final design improves usability by reducing clutter and making the experience more intuitive.

Reflection:

The critique process went well because my teammate provided clear and constructive feedback that helped improve my design. It was helpful to hear suggestions on how to combine different ideas into a more cohesive solution. One challenge was balancing multiple features without making the interface too complex. Next time, I would create more diverse initial sketches and explore different layouts before refining the final design.
